

# Maximum productivity and safety comes from skilled operators working with correctly maintained gear

That's why WOODSMAN PRO™ offer ongoing training and maintenance programmes to keep your people and your plant safe.

## WOODSMAN PRO™ CERTIFIED TRAINING

- We provide operator training and refreshers covering operation and maintenance of the equipment. These are available as on site one-on-one training and classroom-based group training sessions
- All our training is delivered by highly experienced WOODSMAN PRO™ technicians, and are interactive, two-way discussions to enhance learning and participation
- We provide training certificates and document what was covered for contractor's training records
- All completed training is recorded on WOODSMAN PRO™'s operator training database
- Training sessions are flexible so we can drill into specific areas of concern if required. We can hold training at times that suit the operator and contractor to minimise any disruption to harvesting.

## WOODSMAN PRO™ APPROVED MAINTENANCE

- We provide regular maintenance inspections/condition assessments at agreed intervals depending on age, environment, use and operator competence
- A maintenance report is issued and an inspection label is attached to the screen of the cab
- Minor adjustments and maintenance are carried out during the inspection.

## WOODSMAN PRO™ Approved Maintenance

WOODSMAN PRO™ stands behind every machine it sells, for the long haul. Each WOODSMAN PRO™ product is eligible for full factory backup with a scheduled maintenance program to maximise its service life and ensure it's always operating efficiently and safely. At WOODSMAN PRO™, we treat every machine like it's our own, that's why the WOODSMAN PRO™ has a reputation for generating a superb return on investment and outstanding longevity.

## WOODSMAN PRO™ Certified Training

Getting the best from your WOODSMAN PRO™ requires a highly skilled operator which is why we've developed a comprehensive training programme for all our products. The focus of the WOODSMAN PRO™ Training Programme is to develop fast, safe operators who are capable of high levels of output and efficiency while being sympathetic to the equipment.
